ProQuant ANALYTICS

DATA PLATFORM · ONE-PAGE SUMMARY
Demo Client · 2026-09-28 to 2026-09-30

Demonstration. Built from synthetic data.

Can the business's data now run on its own?

Yes, with a few actions.

Every source arrives, is checked and is published each night in 0.7 seconds, and the totals agree from end to end. On the last night one file broke its contract and was set aside whole, and one system changed its format; neither reached the published tables unchecked.

6
sources collected, 1 directly

40,381
rows, checked and kept

0.7 s
for a nightly run

Decisions needed

	DECISION	WHO	BY WHEN
1	Choose where the platform runs: a computer in the business, the company's cloud account, or its IT	Owner	This week
2	Name an owner for each source, who fixes what is set aside	Owner	This week
3	Ask the till provider for an API, so that sales arrive without a file	Data owner	This month
4	Agree the new sales file format with its provider	Data owner	This month

The evidence is in the report; daily operation is in the runbook; dashboards connect as the connection guide shows.
